连六子使用说明

一. 与助教的机器人对局

在 Define.h 中按如图设置

```
#define SERVER_IP "127.0.0.1" //server ip #define SERVER_PORT 10087 //server port
```

打开 Connect6.jar

编译并运行代码,等待程序结束

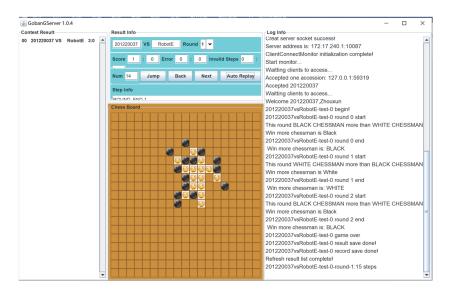

```
D:\Private\MyCode\C++\pro4\Debug\Project1.exe

©Close socket
Connect server: 127.0.0.1:10087

fin receive msg RYP100811090
vereceive msg RYP090709081
veloeive msg RYP121013110
tereceive msg RYP121013110
receive msg RYP090614121
engenerate one step at possition (9, 5, 9, 11): SP09050911
in receive msg RYP090509110
vereceive msg RYP100711081

vereceive msg RYP100711081
```

右击 Connect6.jar 界面左面空白区,refresh 查看结果

二. 自己和自己的机器人打

你需要提前装好 "easyX.h" 这个第三方库

在 main.cpp 立将这部分注释取消,将上面代码注释掉即可

```
///* A simple GUI for test*/
//Game test;
//test.HumanGame();
//test.AIGame(1); //humanColor = WHITE
```

因为作者写说明时,easyX 已经卸载,故无法在此演示

三. 和别人的机器人打

见课程资料,自己琢磨去(其实是作者自己没搞过)
